

## FluidInspectIR® Installations

Our FluidInspectIR® portable systems are proving a hit with several markets. Here we have shipped two systems to SE Asia for FAME analysis in Biodiesel. The systems are battery powered and very robust and easy-to-use.

Below is an installation in the on a ferry/ship for monitoring diesel engine oil degradation.

We also have upcoming installations to monitor lubricant hydrolysis (water uptake and TAN increase) of Environmentally Acceptable Lubricants (EALs) on a ship propulsion system.

Keep an eye out for these images on our linkedin page.

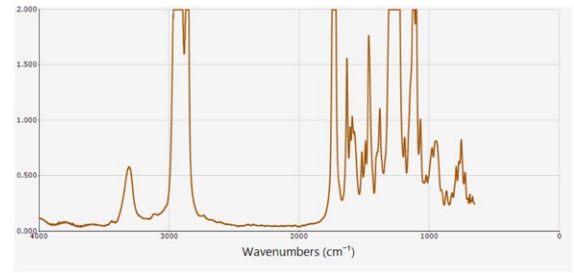

We have set up a new dual application on our FluidInspectIR® Portable system to measure oil in water contamination using a solvent extraction process and to classify the oil type (turbine, engine, hydraulic, gear). Another example of how our systems can provide novel measurement solutions in the field.

## Projects

We have teamed up with a partner to undertake the complex analysis of greases in-line. Be sure to keep yourself updated with our announcements on this as we progress.

## Networking

### OilDoc23

We attended OilDoc in May and it was a great success.

Not only did we showcase our systems at the exhibition, our MD Dr. Carsten Giebeler gave a talk on the new applications and recent advancements of our systems.

As we have been growing our team to meet increasing demands we had one of our new recruits - Dr Gergely Hantos, Senior Systems Engineer, manning our booth.

### ICCI – Istanbul

Carsten also took part in a panel discussion with Mobil Lubricants and other guests on the need real-time monitoring at ICCI (International Energy and Environment fair) in Istanbul. He also presented on our inline oil condition monitoring systems.

### LRVS23

We have signed up again for the Lubrication and Reliability Virtual Summit and will be presenting in the EMEA timeslot. We will be talking about Portable Oil Condition Monitoring and the diverse measurement applications we can provide.

### Lube Expo 23

We are back again at the lube Expo 23. After the resounding success we had at the 2022 edition we are excited to back and you can catch us 26 - 28 September 2023, Messe Essen, Germany at stand 725.
