

FluidInspectIR® Installations

FluidInspectIR® Inline

Several recent installations in the metal cutting cooling fluids and metal parts cleaning process. The systems are measuring key chemistry in the water-based fluids allowing our customers to efficiently manage their additive addition/depletion cycles in real-time.

We also have another 4x installations upcoming on marine diesel engines with a large Ferry company. They have seen the value of our inline marine diesel engine OCM systems in monitoring key parameters such as TBN, water, KV100C and fuel dilution in real-time.

FluidInspectIR® Portable

Another 2 FAME Analysers heading for the Indonesian Biodiesel screening market.

Our portable system is proving a HIT in the Philippines Fuel sector with FAME in Biodiesel (B2) and ethanol in gasoline (E10) measurement programs set up on the same system. Field tests have shown a great level of accuracy across multiple fuel plants along with the robustness, flexibility and ease of measurement.

Projects

We are in the process of constructing a QA screening station for Biodiesel fuel truck offloading. The system will be fixed with rapid measurement of FAME content, water, density and particles.

Training

We welcome Nirmal Giri from our Indian Distributor Ace Instruments later this month for product and application training. Nirmal and his team have recently been showcasing our systems for the marine sector at Ship & Boat International Expo in Mumbai, India.

Networking

We will be demonstrating our systems at the Lubricant Expo North America March 19th-21st 2024 in a booth hosted by our US partner Fluitec.

We are excited to be exhibiting for the 3rd year running at Lubricant Expo Europe from September 17-19th 2024 this time in Dusseldorf. Please put it in your diary and come and see us for a whisky and a chat.

We are exhibiting for the first time at UK metals Expo 24 11-12th September at the NEC Birmingham. We have some great measurement solutions in the metal processing industry and are looking forward to showcasing our systems.

Our Applications Manager Neil Conway and Technical Engineer Never Mubata will be attending the Noria Academy Machinery Lubrication lunch and learn in our home city of Edinburgh, Scotland. If you see them please come over for a chat to learn about the FluidInspectIR family of Oil Condition Monitoring systems.
