

Spectrolytic (www.spectrolytic.com) has developed an exciting product portfolio and provides sustainable fluid management solutions to asset owners all over the globe to improve and optimise their maintenance & reliability operations.

To support our global customer base in marine, power generation, industrial and offshore applications we are looking for a suitable candidate to join our team in Edinburgh as a

C# Developer

You will work on user-centric internal applications and tools that integrate with our Azure databases via APIs, helping to create efficient, responsive, and intuitive software for internal use. Your role will have a significant impact on our team's productivity and customers' experience.

Main Responsibilities

- Design, develop, and maintain internal applications using C#.
- Integrate applications with Azure cloud services and databases through web APIs.
- Ensure high performance and responsiveness of applications, optimizing for scalability and usability.
- Participate and actively contribute to best practices in software development.

Your profile

- Strong proficiency in C# and .NET frameworks.
- Experience in UI development, ideally with WinForms, MAUI, or similar technologies.
- Familiarity with Azure cloud services, cloud-based architecture, and API integration.
- Excellent communication and teamwork skills.

We offer

- A fun place to work and to bring in your ideas
- Hybrid / Remote working
- Excellent opportunity to grow and develop with the company
- Private Health insurance
- Competitive salary
