

Spectrolytic (www.spectrolytic.com) has developed an exciting product portfolio and provides sustainable fluid management solutions to asset owners all over the globe to improve and optimise their maintenance & reliability operations.

To support our global customer base in marine, power generation, industrial and offshore applications we are looking for a suitable candidate to join our team in Edinburgh as a

Cloud Database Specialist

In this role, you will take charge of optimizing and securing our Azure infrastructure to support data-driven analytics and ensure each customer has secure and high-performing access to their data. You'll play a pivotal role in collaborating across teams to enhance our cloud database operations as we continue to grow.

Main Responsibilities

- Manage, monitor, and optimize Azure SQL Database instances to ensure high availability and performance.
- Implement and maintain security best practices, ensuring standards compliance and protection.
- Develop and refine strategies for data backup, recovery, and disaster recovery capabilities.
- Collaborate with analytics and development teams to improve data flow, accessibility, and integration.
- Provide technical expertise in database design and architecture decisions to support business scalability.

Your profile

- Proven experience with cloud database management, ideally in Azure SQL Database.
- Strong knowledge of database security, tuning, and performance optimization.
- Familiarity with database backup, recovery strategies, and ETL processes.
- Experience in data integration and pipeline management is a plus.
- Excellent problem-solving skills and attention to detail.

We offer

- A fun place to work and to bring in your ideas
- Hybrid / Remote working
- Excellent opportunity to grow and develop with the company
- Private Health insurance
- Competitive salary
